WINCHESTER, MA (September 5, 2009) – In order to more clearly define its commitment to and leadership in the silicone release liner business, MPI Technologies announced today that it has changed its name to MPI Release, LLC. The announcement was accompanied by the introduction of the Company’s new logo.

The recent purchase of its new, world-class, Polytype Thermal Coating line in Greenfield, Indiana, has elevated MPI’s competitive advantage within the industry. In addition to being able to apply a silicone coating onto two sides of a substrate in one pass, MPI’s equipment is capable of in-line printing and remoisterizing when required. The Company’s new streamlined, air-conditioned plant expands MPI’s coating capabilities, which already include electron beam [EB] and ultra violet [UV]

curing processes. The acquisition of the Indiana manufacturing operation more than doubles MPI’s capacity to serve the release market from two plant sites. MPI Release can now produce one of the widest product ranges of solvent and solventless silicone release liners in the world, and in the widest possible widths.

“The name change is significant”, said MPI Release President, Ed Alois. “It distinguishes MPI from our competition and demonstrates our commitment to the silicone release liner industry and to our growing customer base. As a privately owned, well-financed company, we strive to collaborate with customers on a confidential basis in order to provide cost-effective, innovative solutions and deliver dependable, personalized service. Our new capabilities will mean even faster response to sample requests and quotations, and will ensure prompt ship dates.”

MPI Release, LLC, is headquartered at 37 East Street, Winchester, MA 01890. The Company, established in the mid-1960s, has been in the release business for over ten years. MPI is a leading supplier to the electronics, cryogenic, construction, composites and other industries.
